

Broadband Billing For Hotel / Motel, Apartment Block & Office

Overview

The IA- Series Broadband Billing Appliances are designed for Hotel / Motel, Apartment Block & Office as complete hardware and software solutions providing high speed Internet access into Hotel guest and conference rooms, Motel guest rooms, Apartment Blocks and Managed Building office space. Computers connect with either standard Ethernet cabling or by wireless. Conference rooms are also catered for. This product is intended to be a profit centre for the Hotel, Motel, Apartment Block, or Managed Building acting as a downstream Internet service provider by way of reselling broadband Internet.

A unique aspect to this system is the ability to utilise much of the existing copper phone wire cabling found within many Hotels, Motels and buildings which reduces implementation costs dramatically. In addition conventional twisted pair cabling is supported along with wireless access points.

Read the HIAstruct.pdf document to find out about the important differences in price and operational issues between managed and unmanaged network/room assignments.

Review the Billing Solutions billing-guide.pdf document to find out more or contact us for further information, demonstrations and pricing.
